Some header (h1 ‘Support Services?’)

Some sub (h2)

Some topic (h3)

This course provides an intensive and comprehensive introduction to web site development and represents the first phase of the development life cycle. Students will use project management techniques to plan and prototype web sites that meet the needs of their project sponsors and the site’s end users. They will be introduced to commonly used web technologies, such as HTML and CSS, web usability principles, and best practices for web graphic design. The course will also cover how to publish, manage and market a web site. User Experience Design will include principles of designing an effective homepage, planning web site navigation and layout, content organization and architecture. venenatis enim et consequat aliquet. Etiam volutpat vestibulum metus eget consectetur. Donec id sodales velit. Fusce bibendum tempor ligula, ac maximus tellus mattis eget. Nullam venenatis enim et consequat aliquet. Etiam volutpat vestibulum metus eget consectetur.
